ABOUT VERSA

More than 70 Years of Innovation and Expertise

Versa Products Co., Inc. (VERSA) is a global engineering and manufacturing company that specializes in solenoid, pilot, and manual actuated directional control valves and related components. Since 1949, VERSA has built a reputation on our products' quality, responsive customer service, and technical expertise. Our ongoing dedication to innovation and our field-proven products have positioned us as a driving force in fluid power and valve automation markets. Our continued focus on Real World Reliability has allowed us to develop a comprehensive line of product solutions for each application, even in the most challenging environments.

Best-in-Class Service

VERSA's commitment to continuous improvements in our products and operational capabilities ensures that we exceed our customers' expectations. With our company motto, "Get it Right, Fast!" we take pride in our 99% on-time product delivery performance and competitive lead times. With decades of experience, we have developed an in-depth understanding of the needs of our customer markets, ensuring that we provide you with the right solution for your application. Our distribution partners are an extension of our brand, offering their expertise and support across the globe.

Maximum Performance

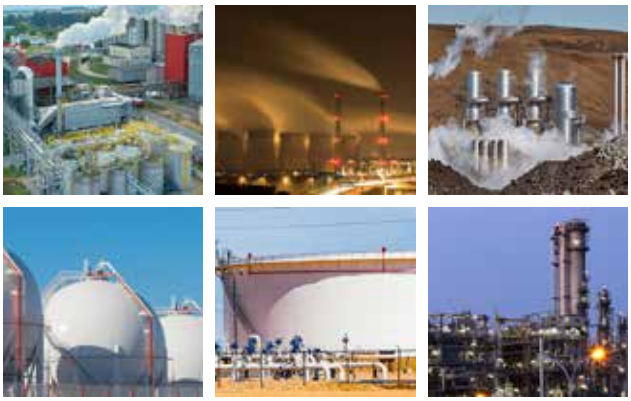
At VERSA, our products are engineered to ensure maximum productivity and uptime reliability even in the harshest environments. Our valves are fully ported and 100% tested before leaving the factory. VERSA stands behind its product performance by offering the industry's only 10-year warranty.

Integrated Product Solutions

VERSA offers a comprehensive product portfolio allowing us the flexibility to provide the solution tailored to meet your application needs.

Key Markets

- Oil & gas - downstream, midstream and upstream
- Renewable energy – bio-fuels, carbon capture, geothermal, hydrogen
- Chemical processing
- Mobile pneumatic
- Power generation
- Aerospace fuel storage and delivery
- Industrial controls



AR–316 SERIES Stainless Steel Regulator

VERSA's AR-316 series of stainless steel regulators and filter regulators are designed to stand up to the harshest environments while providing accurate pressure regulation.

The proven 316 stainless steel housing, filter assemblies, and fluorocarbon diaphragm construction, make the AR-316 compatible with sour gas and adaptable to offshore environments. The AR-316 is NACE compliant, which meets sulfide stress cracking material requirements for NACE Standard MR0175. In the ARFB model, only the wetted parts are NACE compliant.

This quality instrument is economical to buy as well as operate. The AR-316 provides extremely stable and repeatable control of gas pressure.

Features

- Built for harsh environments
- Relieving or non-relieving
- Optional NACE configuration
- Mounting bracket available
- Tamper proof cap options
- Knob, T-bar options
- Low temperature seals available
- Two gauge ports for mounting versatility
- VMAP capable
- Gauges available
- Auto drain available

Component Overview

1. Lock nut for securing set pressure
2. Stainless steel name plate
3. ⅛" NPT threaded vent
4. Investment cast 316L body- lighter weight, enhanced internal design for highest flow
5. Manual drain (shown), auto drain available
6. Pressure adjusting bolt, optional hand knob available
7. Panel nut, for bracket or panel mount of ¼" - ½". Mounting holes supplied on 1" units
8. ¼" NPT gauge ports (2), optional 2" or 2.5" gauges available dry or glycerin filled
9. Filters, 25 micron standard, 5 or 40 micron and coalescing optional
10. Filter Bowl, optional extended volume filter bowl available

ARII–316 SERIES 316 Stainless Steel Filter Regulator

VERSA's AR II-316 general-purpose stainless steel filter regulator is designed to stand up to the harshest environments while providing accurate pressure regulation.

The proven 316L stainless steel body, housing, filter assemblies, and fluorocarbon diaphragm construction make the ARII-316 compatible with sour gas and adaptable to offshore environments.

Model ARFC includes an optional Inconel spring which makes the ARII fully NACE compliant meeting sulfide stress cracking material requirements for NACE Standard MR0175. In the ARFD model only the flow path wetted parts are NACE compliant.

This quality instrument is economical to buy as well as operate. The ARII-316 provides extremely stable and repeatable control of gas pressure.

Features

- Reduced cost filter/ regulator option
- Combines options of individual components
- ¼" NPT
- Exhaust capacity of 1.0 SCFM (1.7 m3/hr) at down stream pressure of 10 psi (0.7 bar) above setpoint

Component Overview

1. Lock nut for securing set pressure
2. Stainless steel name plate
3. ⅛" NPT threaded vent, for piping away vent gases
4. Investment cast 316L body- lighter weight, enhances internal design for highest flow

ARH–316 SERIES High Pressure Stainless Steel Regulator

VERSA's ARH-316 single-stage, high-pressure, non-relieving, regulator, is designed to accept up to 6000 psi input and reduce it to a working range of 10 to 500 psi, making the ARH-316 ideal for first cut natural gas high-pressure regulator.

The ARH-316 Series of stainless-steel regulators are designed to stand up to the harshest environments while providing highly accurate pressure regulation. The proven 316L stainless steel housing assembly and stainless-steel diaphragm make the ARH-316 the choice for installation on pipelines, offshore platforms, and sour gas media applications. The ARH-316 is NACE compliant, which meets sulfide stress cracking material requirements for NACE Standard MR0175.

This quality instrument is economical to buy as well as operate. The ARH-316 provides extremely stable and repeatable control of gas pressure.

Features

- Built for harsh environments
- Max inlet pressure 6,000 psi
- Low temp seals available
- VMAP compatible
- ¼" NPT inlet port
- 40 Mesh filter

Component Overview

1. Lock nut for securing set pressure
2. Stainless steel name plate
3. ¼" NPT threaded vent
4. Investment Cast 316L Body- lighter weight, enhanced internal design for highest flow
5. Manual drain
6. Pressure adjusting bolt, optional hand knob available
7. Optional panel nut, for bracket or panel mount
8. VMAP compatible hub
9. ¼" NPT gauge ports (2), optional 2" or 2.5" gauges available dry or glycerin filled

WARNING. Non-relieving regulators should have a pressure relief valve installed down stream of regulator on dead ended services. This device will prevent excessive build up of pressure protecting systems and components down stream of regulator.

High Pressure Instrument Supply Systems

VERSA's high pressure instrument supply system, can accommodate up to 6000 psi inlet pressure and is designed as a VMAP device. The combination of high pressure filter, regulator connected to a low pressure filter/regulator provides first and second cut reduction. Two ported adapters are provided for relief valve connection. One each, after the high and low pressure regulators (D & F on the drawing below). The same system can be custom configured with a variety of air prep components to meet application requirements.

Shown: VA3-24-F1RY-1-000878
